

Q-Create a comparison table listing at least 4 key differences between RADIUS and TACACS+ features, focusing on protocol type, encryption, ports used, and command authorization.

Feature	RADIUS	TACACS+
Protocol type	Uses UDP	Uses TCP
Encryption	Encrypts the password ; other packet information is generally not encrypted	Encrypts almost the entire packet body , providing stronger confidentiality
Ports used	UDP 1812 for authentication/authorization, UDP 1813 for accounting	TCP 49
Command authorization	Limited command-level authorization; commonly used for network access authentication	Provides detailed command-level authorization , allowing specific commands to be permitted or denied
AAA separation	Authentication and authorization are generally combined	Authentication, authorization, and accounting are separated
Common use	Common for Wi-Fi, VPN, and network access	Common for network device administration such as Cisco routers and switches
