

OSI Model Layer	TCP/IP Model Layer	Real-Life Example (WhatsApp / Zomato)
Application	Application	I type a message in WhatsApp or place a food order in Zomato. This is the part I interact with.
Presentation	Application	WhatsApp encrypts my message before sending it so that only the receiver can read it.
Session	Application	WhatsApp keeps my chat connected while I'm talking to someone without asking me to reconnect again and again.
Transport	Transport	My WhatsApp message is split into small packets and sent safely. If one packet is missing, it is sent again.
Network	Internet	The IP address is added so the message or order knows where it has to go on the internet.
Data Link	Network Access	My phone sends the data to my Wi-Fi router using Wi-Fi or Ethernet.
Physical	Network Access	The data travels as electrical signals, radio waves, or light through cables or Wi-Fi to reach the destination.
