1. **Open Server Manager on your Windows Server VM and use the 'Add Roles and Features' wizard to install the Remote Desktop Services (RDS) role.**

   Step 1: Install RDS Role:Server Manager.

   Open Server Manager > click Add roles and features > select Remote Desktop Services > finish the wizard.

   Step 2: Publish Apps:Collections.

   Go to Remote Desktop Services > Collections > create a collection named StudentApps > click Publish RemoteApps and select Notepad and Calculator.

   Step 3: Create User & Grant Access:User Management.

   Press Win + R, type lusrmgr.msc, create a user named testuser, and add them to the Remote Desktop Users group.

   Step 4: Test Concurrent Logins:Testing.

   Open Remote Desktop Connection and log in simultaneously as testuser and Administrator to test multi-user access.

2. **Configure a Remote Desktop Session Collection named 'StudentApps' and publish Notepad and Calculator as RemoteApps for users.**

   1.Open RDS Management:Server Manager.

   Open Server Manager, click on Remote Desktop Services in the left navigation pane, and select Collections.

   Verification: The Collections overview page is displayed.

   2.Create 'StudentApps' Session Collection:Collection Wizard.

   Click on the Tasks dropdown menu at the top of the Collections tile and select Create Session Collection. In the wizard, enter StudentApps as the collection name, select your Remote Desktop Session Host server, assign user groups (e.g., *Students* or *Domain Users*), and click Create.

   Verification: StudentApps appears in the Collections list once deployment finishes.

   3.Publish Notepad and Calculator as RemoteApps:Publishing.

   Click on the newly created StudentApps collection. In the *RemoteApp Programs* section, click TASKS -> Publish RemoteApp Programs. In

the list of available applications, check Notepad and Calculator, then click Next and Publish.

Verification: Both Notepad and Calculator appear in the published RemoteApp Programs list under the StudentApps collection.

3. **Create a new local user account called 'testuser', add it to the Remote Desktop Users group, and verify that this user can successfully connect via Remote Desktop from another device on your network.**

Part 1: Create the Local User Account ('testuser')

1. **On your Windows Server, open Computer Management (compmgmt.msc).**
2. **Navigate to System Tools -> Local Users and Groups -> Users.**
3. **Right-click in the center pane and select New User...**
4. **Enter the User name as testuser, provide a strong password, confirm it, and uncheck "User must change password at next logon." Click Create.**
5. ***Verification:* testuser is listed in the Users folder.**

Part 2: Add 'testuser' to the Remote Desktop Users Group

1. **Still in Computer Management, right-click the newly created testuser account and select Properties.**
2. **Go to the Member Of tab and click Add...**
3. **In the text box, type Remote Desktop Users, click Check Names to verify the object exists, and then click OK.**
4. **Click OK again to close the properties window.**
5. ***Verification:* Under 'Member of', the account now lists both Users and Remote Desktop Users.**

Part 3: Verify Connection from Another Device

1. **On a different computer connected to the same network (e.g., a Windows client or laptop), open the Remote Desktop Connection client (mstsc).**
2. **Enter the IP address or hostname of the Windows Server.**
3. **Click Connect.**
4. **When prompted for credentials, use the username testuser and the password you created.**

5. *Verification:* **The Remote Desktop session successfully connects and displays the desktop interface of the Windows Server under the testuser context.**

4. **Simulate a scenario where multiple users are connecting to your RDS server at the same time by launching two Remote Desktop sessions as different users. Observe and note any resource or session limitations you encounter.

Hint: Try connecting as both 'Administrator' and 'testuser' and see how the server handles simultaneous logins.**

1. Open Server Manager

Open Server Manager and click on Add roles and features.

2. Install RDS Role

Select Remote Desktop Services from the role list and complete the wizard installation.

3. Create Collection & Publish Apps

Go to Remote Desktop Services > Collections, create a collection named StudentApps, and publish Notepad and Calculator as RemoteApps.

4. Create User & Test Logins

Open lusrmgr.msc, create testuser, add it to the Remote Desktop Users group, and test simultaneous logins via Remote Desktop Connection.
