

Step 1: Connect the USB Webcam

1. Locate an available USB port on your computer.
2. Plug the webcam's USB cable into the port.
3. Wait a few seconds for the operating system to detect the device.

What should happen:

- The webcam may light up briefly.
 - You may hear a device-connected sound.
 - A notification may appear saying that a new device is being set up.
-

Step 2: Install Drivers (if necessary)

Most modern webcams are "plug-and-play" and use built-in drivers.

On Windows

Automatic Installation

1. Connect the webcam.
2. Wait for Windows to install drivers automatically.
3. You may see messages such as:
 - "Setting up device"
 - "Your device is ready to use"

Check Device Manager

1. Press **Windows + X**.
2. Select **Device Manager**.
3. Expand:
 - **Cameras**, or

- **Imaging devices**

You should see the webcam listed.

If you see:

- A yellow warning icon → driver problem.
- Unknown device → driver may need manual installation.

Manual Driver Installation

1. Identify the webcam model.
2. Visit the manufacturer's website.
3. Download the latest driver.
4. Run the installer.
5. Restart the computer if prompted.

Windows

Open Device Manager:

1. Press **Windows + X**
2. Select **Device Manager**
3. Expand **Cameras**

Step 5: Capture a Test Photo

Position yourself in front of the webcam.

Verify that live video is visible.

Click the Photo button (camera icon).
