

Troubleshooting Zoom Webcam Not Displaying (Windows)

1. Close Other Applications Using the Camera

- Exit apps such as Microsoft Teams, Discord, Google Meet (browser tabs), or other video software.
- Press Ctrl + Shift + Esc to open Task Manager and end any camera-related applications.
- Reopen Zoom and test the camera.

2. Verify Zoom Camera Selection

- Open Zoom.
- Click Settings (gear icon) → Video.
- Under Camera, select the correct webcam from the dropdown menu.
- Confirm the video preview appears.

3. Check Windows Camera Permissions

- Press Windows + I → Privacy & Security → Camera.
- Ensure:
 - Camera access is On.
 - Let apps access your camera is On.
 - Let desktop apps access your camera is On.
- Verify Zoom is allowed to use the camera.

4. Restart the Camera Device

- Press Windows + X → Device Manager.
- Expand Cameras.
- Right-click your webcam → Disable device.

- Wait a few seconds, then Enable device.
- Test Zoom again.

5. Update Webcam Drivers

- In Device Manager, right-click the webcam.
- Select Update driver → Search automatically for drivers.
- Restart the computer after any updates.

6. Update Zoom

- Open Zoom.
- Click your profile picture → Check for Updates.
- Install any available updates.

7. Restart the Computer

- Reboot Windows to release any processes that may still be holding the camera.

Resolution

If the webcam works in the Windows Camera app but not in Zoom, the issue is usually caused by:

- Another application using the webcam.
- Incorrect camera selected in Zoom.
- Windows camera permissions disabled for desktop apps.

After closing conflicting applications and enabling camera permissions, the webcam should function properly in both the Camera app and Zoom.
