

Network Cable	Real-World Device/Application	Why It Is Used
Cat5e Ethernet Cable	WiFi Router (home or office)	Cat5e supports speeds up to 1 Gbps , making it suitable for connecting a router to a computer, modem, or network switch. It is affordable and reliable for everyday internet use.
Cat6 Ethernet Cable	Zomato POS Terminal (restaurant billing system)	Cat6 supports up to 10 Gbps over shorter distances and provides better protection against interference. This ensures fast and stable communication between the POS terminal, billing server, and payment systems.
Fiber Optic Cable	IPL Streaming Server (data center)	Fiber optic cables carry data using light signals , allowing very high speeds , long-distance transmission, and high bandwidth. They are ideal for streaming live IPL matches to millions of viewers with minimal delay.
