

Feature	MPLS (Multiprotocol Label Switching)	Leased Line	Broadband Internet
Definition	A private WAN technology that routes data efficiently between different company locations using the service provider's network.	A dedicated, private internet connection reserved for one customer only.	A public internet connection shared among many users through cable, fiber, or DSL.
Connection Type	Private Network	Dedicated Private Connection	Public Internet
Speed	10 Mbps – 10 Gbps+	10 Mbps – 100 Gbps+ (depends on plan)	50 Mbps – 1 Gbps+ (depends on ISP and plan)
Bandwidth	Guaranteed	Fully Guaranteed (Dedicated)	Shared with other users
Reliability	Very High	Excellent (Highest Reliability)	Moderate to High
Latency	Low	Very Low	Medium (can vary during busy hours)
Security	High because traffic stays on the provider's private network	Very High because the connection is dedicated to one customer	Lower because it uses the public internet (usually secured with VPN or encryption)
Cost	High	Very High	Low to Medium
Installation Time	Moderate (few weeks)	Longer (weeks to months)	Fast (a few days)
Scalability	Easy to connect multiple branches	Limited and expensive to expand	Very easy to upgrade or downgrade plans
Maintenance	Managed by the service provider	Managed by the ISP with dedicated support	Standard ISP support
Best For	Large companies with multiple office locations	Banks, hospitals, data centers, government offices, and enterprises requiring 24/7 connectivity	Homes, students, small businesses, and retail shops
Advantages	Secure, reliable, low latency, good for business applications	Dedicated bandwidth, maximum uptime, excellent performance	Affordable, widely available, easy to install
Disadvantages	Expensive compared to broadband	Most expensive option and longer installation time	Speed may decrease during peak hours because bandwidth is shared
Real-Life Example	Zomato connects regional offices and cloud infrastructure securely using MPLS.	IRCTC ticket booking servers, banks, airports, and corporate headquarters often use leased lines for uninterrupted service.	Your home Wi-Fi , cafés, tuition centers, and small offices use broadband internet for browsing, streaming, online meetings, and gaming.
