

| SSID (Hotspot Name) | Signal Strength | Security Type |
|---------------------|-----------------|---------------|
| Samsung F15 5G      | (Excellent)     | WPA3          |
| Samsung A54         | (Good)          | WPA2/WPA3     |
| OPPO Reno 10        | (Fair)          | WPA2          |

I would choose **Samsung F15 5G** because it has the **strongest signal** and uses **WPA3 security**, which provides better protection than WPA2. A stronger signal also gives a more stable and faster internet connection.
