

Q-Download the uploaded file from your FTP server to a different folder on your computer using FileZilla Client, and verify the file size matches the original.

Step 1: Create a New Destination Folder

Create a new folder where you'll save the downloaded file, for example:

C:\FTPDDownload

Step 2: Connect to the FTP Server

Open **FileZilla Client** and connect using the same credentials:

Field	Value
Host	127.0.0.1
Username	student
Password	Student@123
Port	21

Click **Quickconnect**.

Step 3: Select the Download Folder

In the **left panel** (Local site), browse to:

C:\FTPDDownload

Step 4: Download the File

In the **right panel** (Remote site):

- 1. Locate the uploaded image (e.g., photo.jpg).
- 2. Drag it to the **left panel**, or right-click the file and select **Download**.

Wait until the transfer completes successfully.

Step 5: Verify the File Size

Check the Original File

1. Open the folder containing the original image.
2. Right-click the image → **Properties**.
3. Note the **Size** (or **Size on disk**).

Check the Downloaded File

1. Open C:\FTPDownload.
2. Right-click the downloaded image → **Properties**.
3. Compare its **Size** with the original.
