

Q-Create a table comparing FTP and HTTP across at least 5 points: port number, security, data transfer method, use cases, and authentication.

Feature	FTP (File Transfer Protocol)	HTTP (Hypertext Transfer Protocol)
Port Number	Uses Port 21 for control (and Port 20 for active-mode data transfer)	Uses Port 80 (HTTPS uses Port 443)
Security	Standard FTP is not encrypted . Secure versions include FTPS and SFTP .	HTTP is not encrypted . HTTPS encrypts data using SSL/TLS.
Data Transfer Method	Uses two connections : one for control commands and one for data transfer.	Uses a single connection to send requests and receive responses.
Use Cases	Uploading, downloading, and managing files between a client and a server.	Accessing websites, web applications, APIs, and other web resources.
Authentication	Usually requires a username and password (or anonymous login).	Authentication is optional and may use passwords, tokens, cookies, or certificates depending on the website.
