

Q. Configure IP addresses for all devices in your SOHO network: assign static IPs to the printer and smart TV, and use DHCP for the laptops. Show a table listing each device, its MAC address (make one up), and the assigned IP address.

Device	MAC Address (Example)	IP Assignment	IP Address
Wi-Fi Router (Gateway)	00:1A:2B:3C:4D:01	Static	192.168.1.1
Laptop 1	A4:5E:60:12:34:56	DHCP	192.168.1.100
Laptop 2	B8:27:EB:65:43:21	DHCP	192.168.1.101
Smart TV	5C:CF:7F:89:AB:CD	Static	192.168.1.10
Printer	3C:52:82:EF:12:34	Static	192.168.1.20

Network Settings

- **Network Address:** 192.168.1.0/24
- **Subnet Mask:** 255.255.255.0
- **Default Gateway:** 192.168.1.1
- **DNS Server:** 8.8.8.8 (Google DNS) or your ISP's DNS
- **DHCP Range:** 192.168.1.100 – 192.168.1.200

Explanation

- The **Wi-Fi router** acts as the **default gateway** for all devices.
- **Laptop 1** and **Laptop 2** receive their IP addresses automatically from the router using **DHCP**.
- The **Smart TV** is assigned a **static IP address (192.168.1.10)** so it always keeps the same address on the network.
- The **Printer** is assigned a **static IP address (192.168.1.20)**, making it easy for all users to find and print to it without the IP address changing.
