

Physical Security Risk	Mitigation Step
1. Unauthorized physical access to the server room	Install biometric or smart card access control systems and allow only authorized personnel.
2. Fire or smoke damage	Install fire detection sensors and automatic fire suppression systems (e.g., clean agent gas systems).
3. Power outage	Use Uninterruptible Power Supplies (UPS) and backup generators to keep servers running during power failures.
4. Theft or vandalism	Install CCTV cameras, security alarms, and employ 24/7 security personnel to monitor the server room.
