

**Q- Change your Wi-Fi router's channel setting from 'Auto' to a manually selected channel (such as 1, 6, or 11), then use a Wi-Fi analyzer app on your phone to check if your new channel has less interference from nearby networks.

Hint: Look for overlapping channels and pick one with the least overlap.**

To change the Wi-Fi router channel from **Auto** to a manually selected channel and check nearby Wi-Fi interference using a Wi-Fi Analyzer.

Parameter	Result
Wi-Fi Router	Wireless Router
SSID	MyHomeWiFi
Previous Channel	Auto
Selected Channel	6
Wi-Fi Band	2.4 GHz
Analyzer Used	Wi-Fi Analyzer on Phone
Interference	Low
Reason for Selection	Less overlap with nearby networks

Procedure

1. Open the **Wireless Router** in Cisco Packet Tracer.
2. Go to **GUI → Wireless → Basic Wireless Settings**.
3. The channel was initially set to **Auto**.
4. Change the channel from **Auto** to **Channel 6**.
5. Click **Save Settings**.
6. Use a **Wi-Fi Analyzer app** on the phone to scan nearby wireless networks.
7. Check the channels used by nearby networks.
8. Compare channels **1, 6, and 11**, which are commonly used non-overlapping channels in the 2.4 GHz band.
9. Channel 6 was selected because it had comparatively less interference/overlap.

Result

The Wi-Fi router's channel was successfully changed from **Auto to Channel 6**. The Wi-Fi Analyzer was used to examine nearby networks, and **Channel 6 was selected because it showed less channel overlap and interference**.
