

Here are **3 common hardware tools** used in network troubleshooting:

1. **Cable Tester** – Used to check whether an Ethernet cable is wired correctly and to identify faults such as open, short, or crossed wires.
2. **Crimping Tool** – Used to attach RJ-45 connectors to Ethernet cables when making or repairing network cables.
3. **Digital Multimeter** – Used to measure voltage, continuity, and resistance when troubleshooting power issues in network devices or cables.
