

Topology	Advantages	Disadvantages
Star Topology	1. Easy to install and manage. 2. If one cable or PC fails, the other devices keep working.	1. If the switch fails, the whole network stops. 2. Needs more cables, so the setup cost is higher.
Mesh Topology	1. Very reliable because there are multiple paths for data. 2. If one connection fails, data can still reach its destination through another path.	1. Requires many cables and connections, so it is expensive. 2. Installation and maintenance are more difficult.
