

Q- Simulate a DNS lookup for www.flipkart.com using the nslookup command in your terminal and write down the IP address returned along with a brief explanation of what this result means.

```
C:\Users\ratho>nslookup www.flipkart.com
Server:   UnKnown
Address:  10.207.135.207

Non-authoritative answer:
Name:     flipkart.com
Addresses: 64:ff9b::67f3:205a
          103.243.32.90
Aliases:  www.flipkart.com
```

Command Used:

```
nslookup www.flipkart.com
```

IP Address Returned:

- **IPv4:** 103.243.32.90
- **IPv6:** 64:ff9b::67f3:205a

Brief Explanation

The nslookup command queries a DNS server to translate the domain name www.flipkart.com into its corresponding IP address. The result shows that the domain resolves to the IPv4 address **103.243.32.90** (and also an IPv6 address in environment). This allows your computer to locate and connect to Flipkart's web server, since network communication uses IP addresses rather than domain names.
