

Q-Explain the difference between HTTP and HTTPS by listing 3 key differences, and give a real-world example of an app or website you use that relies on HTTPS for secure communication.

HTTP	HTTPS
1. Security: HTTP does not encrypt data, so information can be intercepted.	1. Security: HTTPS encrypts data using SSL/TLS, making communication secure.
2. Port: HTTP uses Port 80 .	2. Port: HTTPS uses Port 443 .
3. Authentication: HTTP cannot verify the identity of a website.	3. Authentication: HTTPS uses a digital certificate to verify the website's identity and protect against fake websites.

Real-World Example

A website I use that relies on **HTTPS** is <https://www.flipkart.com>. When I log in, browse products, or make online payments, HTTPS encrypts my personal information, passwords, and payment details so they cannot be easily intercepted by attackers.
