

Recommended Network Topology: **Star Topology**

Central Device: Network Switch

Connected Devices: 8 Warehouse Computers

I recommend a **Star Topology** because all 8 warehouse computers can connect to one central network switch, making the network easy to install, manage, and troubleshoot. If one computer or cable fails, the remaining computers can continue processing orders and inventory updates. It is also cost-effective for a small warehouse and allows easy future expansion by connecting additional computers to available switch ports.
