

Components

- **Modem** – Connects the home network to the Internet through the Internet Service Provider (ISP).
- **Router** – Creates the local network, assigns IP addresses, routes traffic, and often provides built-in Wi-Fi.
- **Switch** – Expands the number of wired Ethernet ports for devices such as desktop computers or network printers.
- **Access Point (AP)** – Extends or provides additional Wi-Fi coverage, usually connected to the router or switch via Ethernet.
- **Laptop** – Connects wirelessly to the access point.
- **Smartphone** – Connects wirelessly to the router's Wi-Fi network.

Data flow:

**Internet → Modem → Router → (Switch → Access Point/desktop devices) and
Router → Wi-Fi devices (e.g., smartphone).**
