

TASK -3

Static IP Configuration:	
Setting	Value
IP Address	192.168.1.50
Subnet Mask	255.255.255.0
Gateway	192.168.1.1
DNS	8.8.8.8

- Internet worked successfully after assigning the static IP.
- The settings were reverted to **Obtain an IP address automatically (DHCP)** after testing.

TASK – 4

DHCP Range:

Start IP: 192.168.1.100

End IP: 192.168.1.199

The DHCP server automatically assigns IP addresses from the configured range to devices on the network. If two devices are configured with the same IP address, an IP conflict occurs, causing connectivity issues or loss of network access for one or both devices.
